Yu Prananda

Software Engineer | Full-Stack Development & Business Automation | Building Practical Solutions to Real Problems

Tanjung Redeb, East Kalimantan, Indonesia

Summary

Hi, I'm Yu.I'm a software engineer based in Indonesia. I enjoy turning complicated problems into simple, practical software solutions.My work focuses on full-stack development, business applications, workflow automation, and system integration.I believe good software starts with understanding the problem, not just writing code.I enjoy building things that people can actually use, improving how systems work, and learning along the way.Open to remote opportunities and collaborations worldwide.Feel free to connect or reach out!

Experience

Self Employed

Software Engineer
August 2021 - Present (5 years 4 months)
Indonesia

I design and develop software solutions focused on solving real operational and business problems.
My work includes full-stack web development, database architecture, business logic, and workflow automation.
One of my key projects is Bicless ERP, a workforce management system
I independently initiated and developed to improve the accuracy and productivity of operations previously managed through spreadsheets and documents.
The system is currently used in day-to-day operations, supporting employee eligibility checks, document management, reminders, leave requests, and operational monitoring.
Technologies: TypeScript, Next.js, React, PostgreSQL, Prisma.

Education

Universitas Ngudi Waluyo

Bachelor's Degree, Informatics Engineering · (August 2017 - March 2021)
